

Orchid Pharma - Export-Oriented Unit (EOU) Corporate Insolvency Resolution Process

Challenge

Orchid Pharma, A Export-Oriented Unit (EOU), is looking for a systematised processing solution for their pharma laboratory infrastructure. They originally need central control, which was attempted using a variety of PCs and other methods but did not meet their requirements. Management was looking for alternatives

Product Demonstration

After considering all options, they decided to look at vCloudpoint Zero Client Devices. The vCloudpoint Zero Client's special features were advantageous for their centralised administration, and the console was easy to use. The demonstration proceeded well and successfully satisfied their needs.

Solution Provided

With centralised control over each end-point terminal, 22 Terminals of the vCloudpoint Zero Client V1 Enterprise Model have been implemented. The team members can now easily work with the application to the scope of their uses.

Benefits After Implementation

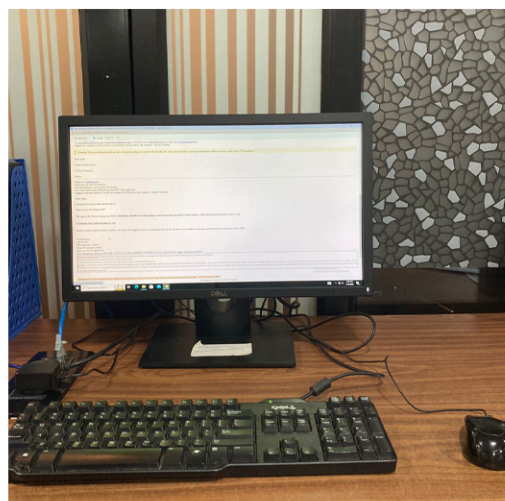

The implementation was easy to set up, which conserved money on installation, and the IT management was happy about that. Because the vCloudpoint V1 devices were smaller, the space limitations were not a problem. Less Power Consumption by the vCloudpoint Devices Saves Money on UPS Costs.

Established in 1992 as an export-oriented unit (EOU), Orchid Pharma Ltd. (Orchid) is a vertically integrated company spanning the entire pharmaceutical value chain from discovery to delivery with established credentials in research, manufacturing and marketing. A multi-therapeutic presence across segments like anti-infectives, anti-inflammatory, central nervous system (CNS), cardio vascular segment (CVS), nutraceuticals and other oral and sterile products. Their pharmaceutical solutions include active pharmaceutical ingredients (API), finished dosage forms. They are globally present across about 50 pharmaceutical companies in India through alliances and partnerships with globally reputed majors.

Their integrated business model enables us to cater to business opportunities throughout the value chain, from research to delivery of drugs across therapeutic segments. Their niche product basket helps them maintain an edge over Their peers in the markets where they are present. In the years to come, driven by a highly competent and motivated team, They will move from strength to strength in the key domains of API, and global generics.

On March 31, 2020, the resolution plan under CIRP has been implemented and the Board has been re-constituted with the members nominated by Dhanuka Laboratories Limited, Haryana, India, the resolution applicant. Their world-class quality products and facilities, regulatory and compliance systems conform to international standards. In fact, They have been the youngest pharmaceutical company in India to receive the coveted ISO Certification.

They accord the highest emphasis to quality and it is given as much attention as innovation and value creation. A fully computerised quality control system monitors operations round-the-clock thereby ensuring highest standards of quality.

CASE STUDY - Pharmaceutical

ZERO CLIENT COMPUTING - NOT JUST COST SAVING

The organization has decided to implement a new strategy to minimize their IT infrastructure, specifically their application and desktop utilization. They will now only set up their infrastructure and environment requirements where there is minimum utilization of these resources.

The vCloudpoint Zero Client Devices were the perfect solution for this organization's needs. After extensive research and consideration, they determined that these devices had the special features they required for their centralized administration. The console was user-friendly and straightforward, making it easy for their team to manage and maintain the system.

During the demonstration, the organization was pleased with the performance and capabilities of the vCloudpoint Zero Client Devices. The demo went smoothly, and they were able to see firsthand how the devices would fit into their existing infrastructure.

One of the standout features of the vCloudpoint Zero Client Devices is their ability to provide a virtual desktop environment that is fast, responsive, and secure. With no local storage or software, there are fewer points of vulnerability, making it an ideal solution for organizations concerned with security. In addition, the centralized administration of the devices allowed the organization to manage the devices and users from a single console, reducing the need for IT staff to manage each device individually. This saved the organization time and resources while also ensuring that all devices were up-to-date and running smoothly.

The vCloudpoint Zero Client Devices proved to be the right choice for this organization. Their special features, user-friendly console, and exceptional performance made them a perfect fit for the organization's needs. This means that they will be consolidating their application infrastructure and environment requirements to a single setup. For example, the administration, finance, and RA departments will all be set up in a single location, as will the IT service desk and meeting rooms.

To connect to their Orchid VMatrix VDIs, the organization will be setting up external office spaces with secured access implementation. This will allow them to access their virtual desktops from any location, while still maintaining a high level of security. Overall, the organization's decision to consolidate their IT infrastructure and set up external office spaces with secured access implementation will provide many benefits, including cost savings, increased efficiency, and improved security.
